(1) Errors given were obtained from counting error.

(2) Starch extracted by repeated washing.

(3) For this determination 7g dried sample were used.

(4) $\mu\text{c/g}$ dried; wet weight not available.

See attached note

Where samples were analyzed at two different times results from both analyses are given.

Total calcium was determined by KMnO_4 titration of calcium oxalate in Dec. 59 and by EDTA titration using murexide indicator in Jan. 59. Calcium values are being rechecked where the discrepancy between the two analyses is greater than 10%.
